Objective

Computer Science undergraduate with full-stack development experience across React.js, TypeScript, Node.js, and Python. Built REST APIs, ML-integrated pipelines, and Docker-containerized microservices — focused on production-grade software delivery and end-to-end feature ownership.

Education

Dayananda Sagar University

Expected May 2027

Bachelor of Technology in Computer Science (GPA: 8.66)

Bengaluru, Karnataka

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Operating System, Computer Networks, Database Management Systems

Projects

Stock Prediction & Analysis | Python, LSTM, TensorFlow/Keras, Scikit-Learn, Pandas, NumPy, Matplotlib

May 2026

- Equity markets exhibit high non-linearity where **static anomaly thresholds** produce excessive false alarms and miss long-term temporal dependencies.
- Built a **3-layer LSTM forecasting pipeline** with a Seq2Seq Autoencoder using volatility-adaptive Mean+3 thresholds on a 60-day sliding window with leak-free MinMaxScaler.
- Achieved **MAPE of 1.76%** on ICICI forecasts with Sharpe Ratio of 0.797 on SBI historical data as portfolio risk indicators. (IEEE ICCBI 2026 — Paper ID: ICCBI-518)

(GitHub)

AgriMind AI | Python, Flask, Scikit-Learn, TensorFlow/Keras, React, Node.js, MongoDB

January 2026

- Farmers lacked integrated soil, climate, and market data as **fragmented advisory tools** forced intuitive crop selection causing yield failure and financial loss.
- Built a **full-stack microservice application** with Node.js and a Flask ML service serving AI predictions via REST in a multi-stage Docker image.
- Crop classifier achieved **99.55% accuracy** on a (2200, 8) dataset with circuit breaker protection sustaining API availability under partial ML service failure.

(Live Demo) (GitHub)

GuardianAI | React, Node.js, Express, MongoDB, JWT, Leaflet

November 2025

- Urban hazards go unaddressed as **no unified platform** combined GPS-verified crowdsourced reporting with AI hazard triage and real-time geospatial visibility.
- Built a **dual-service REST architecture** with a Flask ML microservice for YOLOv8 hazard detection wired into Express with graceful degradation on ML failure.
- Enforced a **6-state alert lifecycle** with per-category SLA deadlines and per-alert audit logs backed by dual gates using GPS (500 m) and ORB matching (1,000 keypoints).

(Live Demo) (GitHub)

Technical Skills

Programming Languages: Java, Python, JavaScript

Frontend: HTML, CSS, React.js, Tailwind CSS

Backend & APIs: Node.js, Express.js, Flask, FastAPI, REST APIs

Databases: MongoDB, MySQL

ML / AI: TensorFlow/Keras, Scikit-learn, Pandas, NumPy

Cloud / DevOps: Docker, Git, GitHub, Render, Vercel

Soft Skills: Problem Solving, Communication, Teamwork, Adaptability

Certifications

Data Analytics Job Simulation | Deloitte

2026

Machine Learning Techniques in MATLAB | MathWorks

2026

Pandas | Kaggle

2025
